

## Project Summary--Conservation4Cozumel

- Conservation4Cozumel.org is created with the potential for visitors to learn more about the ecosystem conservation work that is currently taking place on the Island of Cozumel and more specifically the work that has been done through Cozumel-based Chankanaab National Park, San Gervasio Mayan Site, Faro Cerarain Eco Park, and Cozumel's Island Museum.
- We at Conservation4Cozumel.org would like to promote community empowerment for the Cozumel people and allow them to share their stories, and messages to the Global World.
- Potential ideas for youth interaction include a scavenger hunt using the four Cozumel National Parks, pen-pal/Eco-Chat, and continued updates on the sea turtles and Youth Reef Fish Projects through photos and video. We will research and find ways that Cozumel is currently using renewable resources such as, wind/solar power and communicate their stories globally.
